

ABSTRACT OF THE DISCLOSURE

[80] Systems, methods, computer-readable media, and user interfaces for entering, handling, or manipulating data on a computer desktop may include: (a) providing a first viewable region capable of displaying a first portion of a desktop on a display device; and (b) providing a second viewable region capable of displaying a second portion of the desktop on the display device, wherein a portion of the first viewable region redirects data input to and associates the data input with the second portion of the desktop. Other systems, methods, computer-readable media, and user interfaces may include: (a) maintaining a first portion of a desktop; (b) maintaining a second portion of the desktop, wherein the second portion of the desktop includes a region representing the first portion of the desktop; and (c) altering content of the first and/or second portions of the desktop in at least some instances based on data input directed to the region. The desktop portions or regions may be displayed by separate display devices, in some examples, wherein one display device displays a region that represents the content displayed by the other display device.
